

Department of Information Technology

ITEC 2380 - Lab 6

Background

Keith McDonald Plumbing is a local business in desperate need of an updated website. This is our last lab with KMP. Refer to the material in Lab 1 for more information.

Lab 6

Modify your Lab 5 submission to finalize the design. Make a copy of your homepage and paste into the folder to start building pages. You are not required to make *all* the web pages; I've just included them for your personal endeavors. Creativity strongly encouraged. 😊

I will want to see at least:

- The top 5 pages (Home, Services, Commercial, Employment, About) are w3c valid, contain pictures, linked together and extend the starter content.
- There should be no broken links between the above 5 pages
- Every page in site should have the same branding, feel, and consistency
- All images on the root folder's *img* folder
- HTML validator stays happy (green and no errors)
- CSS only exists in an external file

Refer to this week's Lab video for clarification or ask in D2L discussions. You DO NOT have to organize your folders the way I have in this week's lab help video.

Lab Grading Policy

- Outcomes should be unique and reflect your design choices
- I encourage you to use the validators to find errors in your code
- <https://validator.w3.org/> - I will take off for HTML errors
- <http://jigsaw.w3.org/css-validator/> - I will not take off for CSS errors as long as you're using CSS correctly. Jigsaw is pretty strict IMHO but it can help you find some errors.
- Lab should fulfill all required elements and be submitted as a **.zip** or **.rar** file to D2L Dropbox
