School of Information Technology
ITEC 2380 - Lab 10

Lab 10

Modify your portfolio for Final Submission. Squash all the bugs, iron out the curtains, put a little bit of "jazz" (javascript) in it, and post it to the web. I will want to see at least:

- Javascript and/or jQuery used to make something awesome! Just pick thing, anything, and see if you can make it work. You are not limited to this list; JavaScript libraries are numerous! ;)
    - [Lightbox](#)
    - [Flexslider](#)
    - [Slick](#)
    - http://itwebtutorials.mga.edu/js
    - [Getting Started in Jquery](#) –video
    - [Making a Slideshow](#) –video
- Source Code a ZIP or RAR in Dropbox
- HTML validator stays happy (green and no errors)
- CSS only exists in an external file
- Refer to this week's Lab video for clarification or ask in D2L discussions.

Lab Grading Policy

- Outcomes should be unique and reflect your design choices
- I encourage you to use the validators to find errors in your code
- https://validator.w3.org/ - I will take off for HTML errors
- http://jigsaw.w3.org/css-validator/ - I will not take off for CSS errors as long as you're using CSS correctly. Jigsaw is pretty strict IMHO but it can help you find some errors.
- Lab should fulfill all required elements and be submitted as a **.zip** or **.rar** file to D2L Dropbox
